RUBRIC: Virtual Machine Setup (Ubuntu Desktop)

Activity: Create, Configure, and Install Ubuntu Desktop on a Virtual Machine
Total Points: 100

Criteria	Excellent (100%)	Proficient (75%)	Developing (50%)	Incomplete (0%)	Score
VM Type & Version (10 pts)	Correctly selects **Ubuntu (64- bit)** as the OS type and version. Matches the downloaded ISO architecture.	Selects correct type but wrong version (e.g., 32- bit instead of 64- bit) — VM still works.	Selects wrong OS type entirely (e.g., "Other Linux") — needs correction.	Fails to select any valid OS type; cannot proceed.	/10
Memory (RAM) Allocation (15 pts)	Allocates 4-8GB RAM as required. Understands the host system limitation.	Allocates 3GB – 3.5GB (sufficient but slightly below requirement).	Allocates 2GB or less — causes severe lag or installation failure.	Allocates no RAM or invalid value.	/15
Processor (CPU) Allocation (15 pts)	Allocates **4 CPU cores** with **100% execution cap**. Enables PAE/NX if available.	Allocates 2 cores but does not adjust execution cap or nested VT x	Allocates only 1 core — installation takes extremely long.	Fails to configure processor settings.	/15

		settings.			
Hard Drive (Storage) Setup (20 pts)	Allocates **100 GB dynamically allocated storage** (or fixed). Created a partitioning in drive.	Allocates 25GB but chooses wrong disk format (e.g., VHD) — still functional.	Allocates less than 20GB — insufficient for installation.	No hard drive created; VM cannot boot.	/20
ISO Attachment & Boot Order (15 pts)	Correctly attaches the Ubuntu Desktop ISO to the optical drive. Sets boot	Attaches ISO but forgets to adjust boot order — manually boots	Attaches ISO but boot order wrong — VM boots to blank screen.	Fails to attach ISO; VM cannot install.	/15
	order: **Optical → Hard Disk**.	via "Force BIOS" first time.			
Proper Installation Execution (25 pts)	Completes full installation: partitioning ("Erase disk"), user setup, timezone, keyboard. No errors. Reboots successfully into GUI.	Completes installation but makes minor errors (e.g., wrong timezone — fixes later).	Installation starts but fails midway (partitioning error, corrupt ISO, or power loss).	Installation not attempted or aborted.	/25

TOTAL SCORE: ___ / 100
DOCUMENTATION REQUIREMENT

Student Name: Glen Marquez
Date: Aug 27
VM Name:

1. VM Specifications Summary

Component Allocated Value

VM Type / OS Ubuntu (64-bit)

RAM 4 GB (4096 MB) CPU Cores 12

Hard Drive Size 25 GB (Dynamic / Fixed) Storage Controller SATA

/ SCSI

Network Adapter NAT / Bridged

ISO File Used ubuntu-26.04-desktop-amd64.iso

2. Step-by-Step Setup Process

(Describe what you did, in order. Include commands used, if any.)

1. Setup Linux Ubuntu 64-bit Iso File VM
2. Setup VM setting (Memory, CPU and Storage)
3. Boot the BIOS for OS setup
4. Wait for full installation
5. Opened terminal after desktop installation

3. Issues Encountered & Resolutions

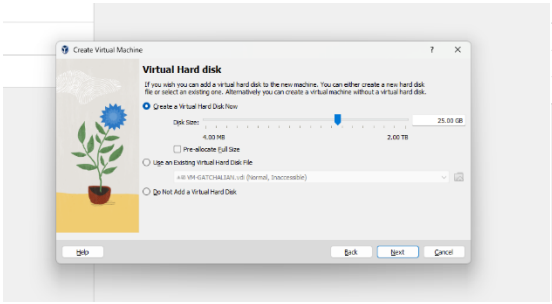

(List any problems during setup and how you fixed them.)

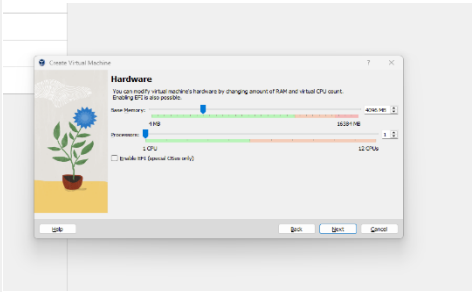

Issue	Solution

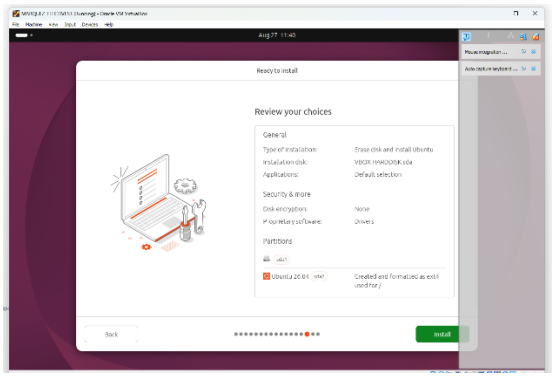

4. Verification Screenshots

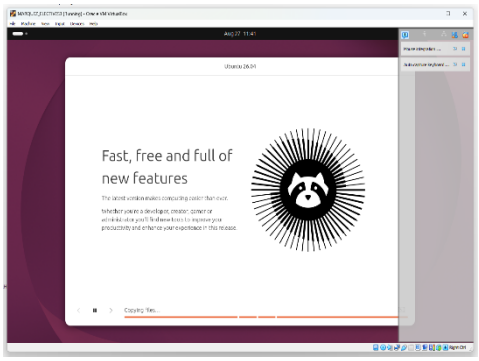

(Paste screenshots here or attach separately)

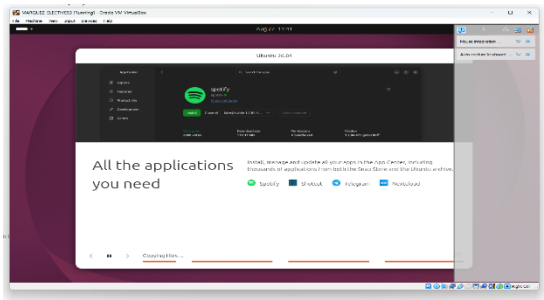

- VM Settings (Memory, CPU, Storage)
- ISO Attached / Boot Order
- Installation Progress
- Final Desktop with Terminal Open

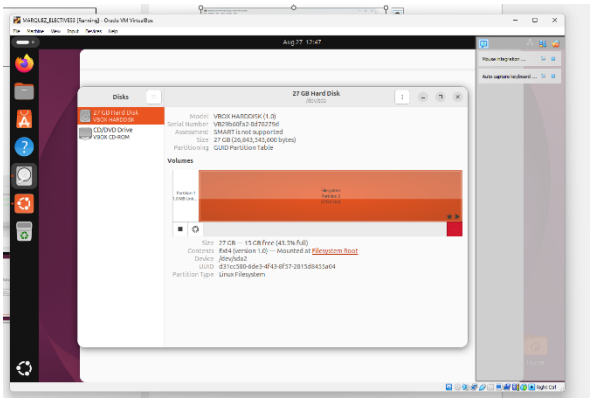

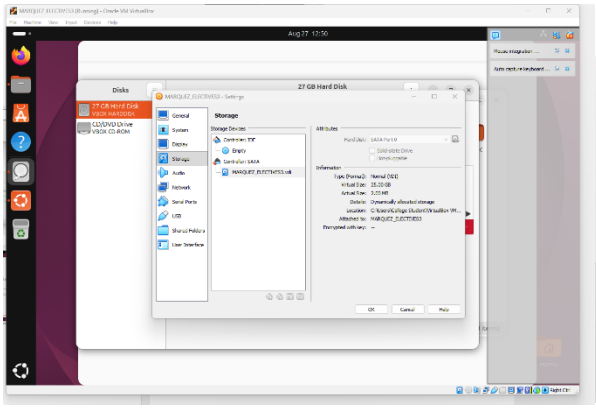

All the applications
you need

Disks
27 GB Hard Disk
Volumes

Disks
27 GB Hard Disk
Storage
